GARDEN

Technical data sheet n° 073 Rev. 03/03/2014

Detergent for cleaning burnt oil and fat from ovens, roasters, fryers and griddles

APPLICATIONS:

Garden is a detergent suitable to remove oils, fats and processing residues, even baked or charred, from industrial equipments. It's used to clean ovens, roasters, fryers, griddles, grills, cooking hob, etc.

Garden is a highly alkaline product and it can damage aluminum, light alloys and some types of paint.

It can be safely used on steel, plastic, cast iron, marble and ceramic surfaces.

METHOD OF USE:

Garden can be used either pure or diluted with water in different proportions, depending on the amount and type of dirt to be removed.

The application can be carried out by spray, brush or immersion. Always rinse thoroughly. The use of hot water speeds up both washing and rinsing action.

FIELDS OF APPLICATIONS: The product finds its application in the food industry as well as for intensive use in kitchens (canteens, hospitals, hotels, restaurants).
