

## Seamaster Acid Free Gel Rust Remover

Technical sheet n° 900  
Rev. 19/02/2013

### Acid Free Gel for rust stain removal

#### Description

##### Category:

- Deoxidizer,  
stain removal

##### Applications:

- Remove the oxides  
and the rust spots  
from all surfaces

##### Strengths:

- Acid free
- Act only  
on the oxide e  
does not affect metals

Removes oxides from stainless steel, steel, copper, brass, bronze and rust oozing from fiberglass, wood, painted surfaces, plastic, etc.

The product acts only on the oxide, is acid free and does not corrode the metal or treated surface. Ideal for application on vertical surfaces.

#### How to use

After removing other types of dirt (with Chemical Roadmaster products), spread evenly the product (form a layer of 2/3 mm) directly on the oxide with a brush.

On iron, steel and stainless steel, it becomes purple. On non-ferrous metals (bronze, copper, brass, etc.) the product does not change its color.

Let it act for a few minutes but do not let it dry on the surface. Remove the product with a damp cloth.

On resistant oxide, rub with a cloth or brush. To obtain a mirror polished surface, use Seamaster Spray Metal Polish.

Do not contaminate the product with the dirty brush. A limited contamination, however, does not affect its functionality.

Product for  
professional use.  
We decline any  
responsibility for the  
improper use
