

Seamaster Toilet Treatment

Technical sheet n° 918
Rev. 19/02/2013

Category:

- Product for chemical toilets

Applications:

- Eliminate bad odors and break down residues

Strengths:

- Delicate perfume
- It does not damage the systems
- Formaldehyde free

Product for professional use.
We decline any responsibility for the improper use

Deodorizes and breaks down residues in chemical toilets

Description

Seamaster Toilet Treatment is a product for the treatment of chemical toilets installed on boats and campers, which eliminates unpleasant odors and effectively disintegrate any residue.

Effective on black water (containing organic waste and toilet paper) and, in general, tanks or waste waters. The formulation prevents the formation of bad odors and gases. It does not damage the valves and seals.

Completely formaldehyde-free, with a delicate citrus scent.

How to use

Shake before use. For toilet tanks and sewage water, add 5 ml per liter of water (for example to a tank 50 lt add 250 ml of the product).

Then add a minimum of 3 to 4 liters of water (up to cover completely organic residues).

Empty the tank only where permitted and rinse well.

To clean the pipes add 100 ml of the product directly into the toilet for a few seconds and turn on the pump discharge (up to fill the pipes)

Leave on for one night, then rinse with water.
