

Seamaster Water Proof

Technical sheet n° 918
Rev. 19/02/2013

Category:

- Universal
boat waterproofing

Applications:

- For all absorbent
Surfaces

Strengths:

- Nanotechnology
- Odorless

Product for
professional use.
We decline any
responsibility for the
improper use

Ecological waterproof treatment for all nautical surfaces

Description

It waterproofs and restores the waterproofing quality of all the absorptive surfaces of the boat, such as marine fabrics, awnings, teak and other types of wood, etc.

The treatment creates an invisible barrier that repels water and dirt transported by it. It does not form films and does not alter the appearance of the treated materials, which remain transpiring.

It contains no solvents, so it is odorless, harmless to humans and the environment and is non-flammable.

It can therefore also be used in confined spaces without ventilation.

Based on nanotechnological components.

How to use

Seamaster Water Proof is ready for use.

Spray the product abundantly on the surfaces to be treated that must be clean and dry from a distance of about 20 cm.

It can be also applied by roller or brush.

Apply liberally, until saturation of the substrate.

Allow to dry before stepping on the treated surfaces.
