

ROADFLON SECCO L

Technical Sheet n° 158 Rev. 22/01/2016

Antioxidant lubricant mould release spray

APPLICATIONS:

Roadflon secco L is a high performance dry lubricant based on micronized Teflon. The fast evaporating solvents contained in the product act as a vehicle for uniformly spreading the Teflon particles on the surface to be lubricated, previously cleaned and degreased. When the solvents have evaporated, a very thin, non-oily film of dry mould release agent is formed on the treated part, with high thermal and chemical resistance characteristics typical of PTFE-based compounds. The film is resistant to temperature and to chemical-physical aggressions.

METHOD OF USE:

Degrease the surfaces to be lubricated with a suitable solvent, such as our Solfast product. Shake well the canister for about thirty seconds and spray Roadflon secco L evenly from a distance of about twenty or thirty centimetres from the surface.

FIELD OF APPLICATION

Roadflon secco L is usually used in situations and in very different sectors such as:

- Plastic moulding
- Special lubrications
- Nautical sector
- Mould release agent for special processes
- Maintenance departments
