

SANA GREASE

Technical Sheet n° 169 Rev. 10/02/2016

Grease lubricant spray for food industry machinery

APPLICATIONS:

Sana Grease is a odourless and colourless grease lubricant spray, based on liquid paraffin FU (Italian Pharmacopeia) and refined hydrocarbons FU, which exceed all purity requirements of the main pharmacopoeias and comply with the Food and Drug Administration standards. Based on this, Sana Grease can be used for the lubrication of valves, pistons, rollers, pumps, rotary cams, belts, equipment for bakeries, bottlers, tinning machines, filling machines and other machinery used in the food industry.

Sana Grease resists water and steam.

METHOD OF USE:

Shake well the canister before use and spray on the parts to be lubricated from a distance of 15-20 cm. In difficult to access places, use the extension tube.

Distribute evenly. In the event of an occlusion of the dispenser, it is recommended to heat the upper part of the valve in water at 40°C.

FIELD OF APPLICATION

- Food industry

TECHNICAL CHARACTERISTICS

Format	Spray
Operating temperatures	-20 +120 °C
Capacity	400 ml
