Anti-fog spray for glasses, visors and masks

Applications

Fogging block spray for transparent surfaces in cases of rain, exhalation or in any case in those situations in which the vapor condenses. Thanks to its convenient foam application, the product does not drip and is ideal for treating and sanitizing glasses, masks, helmet interiors, caps and visors. Also excellent for windshields and car interior windows treatment: do not spray the product on hot surfaces or surfaces previously treated with other products.

How to use

Shake the can well and spray the product on the surface to be treated or in the case of small surfaces (such as glasses), preferably on a cloth. Rub with a soft cloth, preferably made of a material suitable for cleaning lenses and glasses. Maximum effectiveness occurs 10-15 minutes after application.
