Chelatron OY02

Technical Sheet n° 924
Rev. 31/01/2018

Reverse osmosis plants dispersant

Category:

- Water treatment product

Applications:

- chelator-dispersant

Strenghts:

- Concentrated products

Applications

Chelatron OY02 is a dispersant chelator for reverse osmosis systems. The characteristics of the formulation make it possible to minimize the phenomena of calcium and magnesium encrustation, guaranteeing high efficiency of the membranes.

How to use

Chelatron OY02 must be fed in line at the head of the system. Dosage must be agreed with the Chemical Roadmaster Technical Service based on the characteristics of the water and the system.

The average dosage, however, can be considered indicatively oscillating between 15-25 ppm on the production of osmosis water.

Technical specifications

pH	7,5
Odor	Not perceptible
Color	colorless
Density (20°C)	1,2 g/cm ³

Product for professional and industrial use. The manufacturer declines all responsibility for any damage caused by the improper use of the product
