

## Industry Line

# Inibitor DDA

Technical Sheet n°  
937  
Rev. 12/11/2018

### Category:

- Water treatment products

### Applications:

- Oxygen scavenger-dispersant

### Strenghts:

- Concentrated product

## Applications

Inhibitor DDA is a liquid conditioner used to eliminate the oxygen dissolved in the feed water which can give rise to corrosive phenomena from pitting. The presence of a non-volatile oxygen scavenger allows it to be used in food companies.

Thanks to its mixture of dispersants, it allows to limit the fouling phenomena of the system to a minimum and ensure correct efficiency of the heat exchange over time.

## How to use

Inhibitor DDA can be fed either in line or in the feed tank. The dosage must be agreed with the Chemical Roadmaster Technical Service based on the characteristics of the water and the system.

The average dosage, however, can be considered indicatively oscillating between 20 - 40 ppm referred to the steam production of the system.

## Technical specifications

pH	9,5
Odor	Not perceptible
Color	Colorless
Density (20°C)	1,05 g/cm <sup>3</sup>

Product for professional and industrial use. The manufacturer declines all responsibility for any damage caused by the improper use of the product.
