Lubispray

Technical data sheet
n° 096
Rev. 03/07/2014

Category:

- Special products

Applications:

- Effectively lubricates on a thousand occasions

Strengths:

- Effectiveness
- Practical use in spray

Product for professional use. The manufacturer declines all responsibility for any damage caused by an improper use of the product.

Applications

Lubispray is a lubricant based on highly selected paraffinic oils, with a high degree of purity, practically zero reactivity and low odour.

Lubispray is an excellent lubricant for medium-low friction and remains well adherent to the surface on which it is applied for a long time, protecting metals from corrosion.

Fields of use

Lubispray, thanks to its chemical inertness, is well suited to be used in the general lubrication of various mechanical parts, such as:

• light gear • ironers, winders • weapons • hinges and joints • small kinematic mechanisms • other uses.

Therefore suitable for many working realities, such as:

• window and door manufacturers • car and motorcycle repair shops • precision instruments • armories • textile industry • mechanical Engineering • craft activities • hobby and do-it-yourself

How to use

Carefully clean the part to be treated from any oily residues. Spray with the system stopped from a distance of about twenty centimetres, after having shaken the can well. Wait a few minutes and start the machine. After stopping the movement, spray again and restart definitively. Then lubricate, as needed, even with the system running, using the special straw provided if necessary.
