

## Industry Line

# Natural Gum

Technical Sheet n° 149  
Rev. 03/06/2014

## Rubber ecological reviver

### Category:

- Reviver for tires and tires

### Strenghts:

- Ecological product
- Does not contain solvents and silicone oils

## Applications

Natural Gum special ecological blend gives both synthetic and natural gums an exceptional reviving and regenerating effect. The product also creates a temporary protective veil which helps to preserve the treated parts over time.

Natural Gum is not aggressive and its use is therefore safe on all types of rubber and plastic, both in the industrial and domestic fields. The product is perfect for polishing tires and external bands of motor vehicles, recovering regenerated rubber parts, cleaning and polishing rubber parts of systems and chromatic renewal of gaskets. It can be used in place of silicone brighteners, with respect to which it has the advantage of not containing mineral solvents, which can damage rubber in the long run.

## Fields of use

Natural Gum can be used for rubbers treatment and some plastics both in the industrial and private sectors, in particular in:

- Rubber industry
- Vehicle maintenance
- Bodywork
- Mechanics
- Private use
- Machinery production workshops

## How to use

Use pure or diluted in water at 25-30%. Distribute on the parts to be treated with a brush or a rag, then leave to dry.

Drying and temporary protective veil creation takes place within a few minutes, after which you will notice a change in color and brilliance.

Product for professional and industrial use. The manufacturer declines all responsibility for any damage caused by the improper use of the product.
