

Industry Line

Pulitore forte Granito

Technical Sheet n° 685
Rev. 15/05/2017

Category:

- Acid cleaners

Applications:

- Deep cleaning of acid-resistant stones

Strengths:

- Great effectiveness

Product for professional and industrial use. The manufacturer declines all responsibility for any damage caused by the improper use of the product.

Acid base for granite and stones

Applications

Formulation is able to thoroughly clean stone surfaces by eliminating dust, impurities, oxidation residues, rust and so on.

Its acid formula allows it to act quickly and deeply, cleaning the visible part of the stony material by dissolving it, and extracting the polluting residues responsible for the poor visual conditions of the material from the micro-porosities.

Special additives eliminate and retain dissolved residues, preventing them from redepositing on the surface, and also blocking the formation of whitish salt powders.

How to use

Dilute the product in concentrations ranging between 1:4 and 1:8, depending on the dirt and degree of cleanliness required, spread it on the surface with a brush, rag or sponge and wait a few minutes.

Then wipe with water and rinse thoroughly.

DO NOT USE ON MARBLE AND LIMESTONE STONES: given the variety of stones and finishes on the market, always carry out a preventive test.

Field of applications

The product thoroughly cleans all stone surfaces after and before processing, for:

- Marble workers
- Cutters
- Wholesalers
- Sale of building materials
- Installers
- Cutting cemetery headstones
- Building recovery
- Construction companies
- Restructuring companies
