

## Industry Line

# Remograf

Technical Sheet n° 876  
Rev. 27/01/2017

## Gel graffiti remover

### Category:

- Sacrificial anti-graffiti

### Applications:

- Building surfaces protection from graffiti

### Strenghts:

- Ready to use
- Avoid costly surgeries

### Resa:

- From 4 to 15 m<sup>2</sup>/litro

Product for professional and industrial use. The manufacturer declines all responsibility for any damage caused by the improper use of the product.

## Applications

Remograf is a non-hazardous gel product free from chlorinated solvents, capable of removing writing and graffiti from slightly porous building surfaces as they are, and from more porous surfaces previously treated with the protective Scudograf.

Suitable for

- marble surfaces;
- natural stones and granites
- facing bricks;
- concrete;
- concrete blocks;

On plasters, especially if colored, there may be a variation in the color tone.

If in doubt, carry out a preventive test.

## How to use

Using a brush, apply a generous layer of product on the writings and leave it to act for 10-20 minutes.

Remove all Remograf and graffiti residues using spatulas, hard plastic brushes or rags.

After removing the bulk of the residues, wash with plenty of hot water with the help of a hard plastic brush.

Graffiti removal depends on the porosity of the support; on low porous substrates cleaning is easy, while on very porous substrates it can be difficult.

For this type of surface, we therefore recommend the preventive application of the protective Scudograf which prevents the penetration of the spray paint inside the building surface.

## Technical specifications

pH	n.a.
Odor	Light
Color	Amber yellow
Density (20°C)	1,11 g/cm <sup>3</sup>
