## Snake and reptile repellent based on essential oils

### Category:

- Snake and reptile repellent based on essential oils

### Applications:

- treatment of gardens and outdoor spaces, closed environments

### Advantages:

- based on essential oils
- repellent for snakes and reptiles based on perfume

Product for professional use. The manufacturer declines all responsibility for any damage caused by an improper use of the product.

## Applications

Snake repellent, in granules, based on essential oils. Once dosed on surfaces creates an odor barrier that is extremely annoying for their smell sense. Repellent inhibits snakes smell sense, preventing them from transiting and staying in places frequented by people and animals. In environments, areas and near dens where it is used, the product creates a natural and insurmountable barrier that keeps them away.

It is essential, where possible:

to eliminate any possible hiding places and any potential form of food that attract snakes, cut the grass frequently, prune bushes and hedges, erect piles of wood away from homes, avoid accumulating waste that is attractive to mice and insects, close cracks and holes.

It releases a pleasant scent into the environment.

## Method of Use

Spread the product, 1000 ml of product is enough to cover an area of about 50 square meters.

The product retains its disabituating properties for about 10 days.

### Fields of Application:

The treatment is essentially divided into two moments, the first with a high impact power, which requires a significant dosage in the areas at risk, the second maintenance which requires a weekly intervention to be done continuously and regularly.

The first results will be noticeable after at least two weeks from treatment.

In case of rain, washouts or removal of the product, repeat the treatments as indicated in the instructions for use.

It can be used all year if necessary, but period where treatment must be done is from spring to autumn.
