CAL-CLEANER

Technical data sheet
n° 1179 Rev. 18/02/2025

Descaler for toilet tanks

Category:

- Acid descaler and
limescale remover

Applications:

- descaler for toilet
flush tanks

Advantages:

- quickly
removing limescale

Applications

Specific product for cleaning and removing limescale, iron oxides, rust and solid residues from both external and internal toilet flush tanks. Eliminates residues and scale that can limit the water load and the functionality of the float.

With regular use of product, tank is kept efficient and formation of limescale and yellow residues on sanitary fixtures is thus avoided, as well as the continuous descent of small quantities of water due to the float that no longer fits perfectly into its seat due to the limescale and scale that covers it.

CAL CLEANER is an easy-to-use product designed for cleaning toilet tanks.

It is regularly used mainly in the plumbing sector as a descaling and limescale cleaner, and is found in retail distribution for domestic use.

Method of Use

Remove external flush button plate and mask. Drain water and close the internal tap to refill.

Insert one liter of CAL CLEANER and two liters of water and leave to act for about 45 minutes. Open the water tap and let it fill until the cistern is full, wait a few minutes and then drain.

Run a couple of flushes.

If necessary or in the presence of heavy deposits, repeat the operation.

Reassemble the mask and reposition the plate.

Product for professional use. The manufacturer declines all responsibility for any damage caused by an improper use of the product.
